

2021 PUBLIC-RELEASE DATASET NOW AVAILABLE

A photograph of an ambulance at night with its emergency lights flashing. Overlaid on the image are various data visualization elements, including a white ECG line, a blue bar chart, and a blue line graph, suggesting a focus on data analysis in the emergency medical services field.

48,982,990
EMS ACTIVATIONS
13,949
EMS AGENCIES
53
STATES AND TERRITORIES

The National Emergency Medical Services Information System Technical Assistance Center (NEMSIS TAC) today announced the availability of the 2021 Public-Release Research Dataset, the largest publicly available dataset of emergency medical service activations in the United States. With this release, NEMSIS aims to improve understanding of, confidence in, and support for EMS data collection and analysis that will lead to data being utilized more effectively to improve patient care.

The **2021 Public-Release Research Dataset** is a subset of the National EMS Database that is the repository for EMS data collected from U.S. States and Territories. NEMSIS maintains the national standard for how patient care information resulting from an emergency 911 call for medical assistance is collected. The dataset includes 48,982,990 EMS activations submitted by 13,949 EMS agencies servicing 53 states and territories.

Those interested in requesting a copy of the 2021 Public-Release Research Dataset can contact the NEMSIS TAC and fill out a request form at their website <https://nemsis.org/using-ems-data/request-research-data>. A password-protected USB drive containing the dataset, the 2021 NEMSIS Data User Manual, NEMSIS Data Dictionary v3.4.0, Extended Data Definitions v3.4.0, and sample SAS code file will be sent via postal service.
