Overview

This report provides an overview of the key projects led by the NEMSIS Technical Assistance Center (TAC) during the past month.

NEMSIS Annual Meeting

We look forward to convening the NEMSIS community for the **2026 NEMSIS Annual Meeting, October 6–9 in Heber, Utah.**

We will commemorate **25 Years of NEMSIS: A Legacy of Data, A Future of Care**, recognizing the program's impact on advancing EMS data and improving patient care nationwide.

Thank you to all who are registered for the meeting as well as those who wished to attend but are unable to join us in person. To support meaningful participation and engagement, this year's meeting will be held exclusively in person.

This year, we will introduce a new, more interactive format based on feedback from state partners and software vendors. Instead of traditional presentations, participants will spend most of their time working together in small groups to explore challenges, share perspectives, and develop practical solutions to key challenges facing our community.

Participants will be added to the five selected Pods:

A. Compliance

Focus: Compliance testing, state rules, validation, communication standards, version implementation

B. Tools & Resources

Focus: Education, communication, funding, training, working groups, support resources

C. End-User

Focus: Provider burden, workflow, documentation, practical usability

D. Standardizing Data

Focus: Facility IDs, dispositions, datasets, common definitions, NERIS alignment

E. Interoperability

Focus: Data exchange, submissions, APIs, outcomes data, integrations

Thank you for joining us as we discuss the next phase of NEMSIS and EMS data collection.

Public Training

NEMSIS Public Training

A public training, titled "The National Emergency Response Information System (NERIS) Update," was held on Tuesday, September 1, 2026, and presented by guest, Baylie Scott, Fire Safety Research Institute (FSRI). The session explored the latest developments, accomplishments, and future direction of the NERIS standard.

The objective of the session was for participants to gain an understanding of how NERIS and NEMSIS complement one another and identify opportunities for alignment and interoperability across the emergency response data ecosystem.

If you missed the session and would like to review the information, please click here to access the [September Public Training](#).

If you want to suggest a training topic, please let us know by submitting it here: [NEMSIS Help Desk](#).

Stakeholder Engagement

v3 Implementation Calls

September 9: v3 Implementation Call (Canceled due to a DCC Division Meeting)
Attendees:

[September 23: v3 Implementation Call](#)

Attendees: 127 (Representatives from 28 States and 42 Vendors)

Upcoming NEMSIS v3 Implementation Calls

v3 Implementation Calls are held on the 2nd and 4th Wednesday of each month from 9:00 – 10:30 AM (MDT)

The next call dates are:

- October 14
- October 28

Link to join: <https://utah-health.zoom.us/j/8085088800>

NEMSIS/ NASEMSO Collaboration

Agenda topics from the NEMSIS/NASEMSO Data Managers Council (DMC) meeting:

- Presented and discussed the NEMSIS v3.5.2 Timeline
- Discussed working groups for the Facilities List Project

New Blood Transfusion Report

The NEMSIS TAC is actively engaged in collaborations to advance knowledge and resources that support Pre-hospital Blood Transfusions. Demonstrating our commitment to data-driven innovation, our team analyzed national EMS data. We produced the 2024–2025 Blood Transfusion Report, providing an unprecedented national snapshot of 48,048 EMS-administered blood transfusion activations and informing future pre-hospital care initiatives.

The report documents a steady increase in utilization over the 24-month period and characterizes administration by transport mode, service type, patient demographics, and clinical context. These findings provide an initial national baseline to inform policy, system planning, and future data standard development related to prehospital transfusion practices.

We encourage you to download and share a copy of the report at <https://nemsis.org/using-ems-data/articles-and-publications/>.

Okta User Accounts

All NEMSIS user accounts are managed through the Okta service and require dual authentication using your cell phone via the Okta Verify App. We kindly request that State EMS Data Managers and Software Vendor companies notify the TAC when an Okta account needs to be disabled.

All accounts inactive for **60 days** are automatically locked. Passwords for Okta accounts also must be changed every 60 days, or they are locked.

Okta accounts **can be unlocked** using the [Forgot Password](#) link located in the footer of the NEMSIS website.

If you are unsuccessful with the password reset, wait 30 minutes and try again. If your password reset attempts are unsuccessful, submit a [Help Desk Ticket](#) and choose General NEMSIS Questions from the options.

Data Submission Summary

The NEMSIS TAC collaborates with State Data Managers and Software Vendors to ensure complete and timely data submissions to the national EMS database. Several States are currently submitting data using the v3.4, v3.5, and v3.5.1 data standards.

The counts listed below represent activity from Jan 1, 2026, through September 30, 2026. The information for unique ePCRs is based on Unit Notified By Dispatch Date/Time.

State submissions using the v3.5.1 standard were 3,660,898 records from 2,103 agencies. State submissions using the v3.5 standard were 42,592,119 records from 14,052 agencies. State submissions using the v3.4 standard were 368,214 records from 437 agencies.

The reporting dashboards are all currently reflecting v3.4 and v3.5 data together. The national average failed submission rate for all data submissions is 1.44%.

Public-Release Research Dataset

The NEMSIS TAC is pleased to announce the availability of the 2025 Public-Release Research Dataset, the nation's largest publicly accessible dataset of emergency medical services (EMS) activations. We are grateful to the thousands of EMS clinicians, state and territory EMS offices, software vendors, and national partners whose dedication makes the EMS data collection possible. Your efforts ensure that EMS data can guide evidence-based care, shape policy, and improve patient outcomes nationwide.

We worked closely with states and vendors to receive over 63 million EMS activations submitted by 14,801 EMS agencies serving 54 states and territories.

The Public-Release Research Dataset aims to improve understanding of, confidence in, and support for EMS data collection and the analysis that will lead to improved patient care. The dataset does not contain information that identifies patients, EMS agencies, receiving hospitals, or reporting states.

In September, we approved the release of 69 datasets. If you are interested in requesting a copy of the 2025 Public-Release Research Dataset, please complete a [request form](#) on the NEMSIS website.

v3 Software Vendor Compliance Update

The [V3 Compliant Software Testing Status](#) page reflects both v3.5.0 and v3.5.1 compliant software products. Listed below are the software vendor companies seeking NEMSIS compliance and the versions that are being tested and completed. On the webpage you can use the toggle feature to switch between v3.5.0 and v3.5.1 and view all the compliant software.
